Remote

**Participants:**  
8 to 12  
8 to 12

**Duration:**  
Two full days  
10 hours (over four sessions)

Support people with learning and other disabilities to learn new tasks

Tailor task-based training to meet a diverse range of learner needs

Develop strategies for analysing job roles and tasks

Offer alternative training approaches, proven to enable people with learning disabilities to learn complex tasks

*We all need support when starting a new job or learning a new skill, but traditional vocational training methods can often be ineffective for those with additional barriers to learning.*

*The Supported Employment model (place, train, maintain and fade) is regarded as the most-effective method in this context. Training in systematic instruction (TSI) is a vital component in delivering successful employment outcomes for these individuals – and for them to achieve independence.*

## What you'll learn

- The history and evidence for TSI (partly through a pre-course workbook)
- Preparation for task-based training and identifying learners' support needs
- Task analysis - how to break tasks down into smaller chunks
- The Natural Inventory and effective use of data collection for monitoring progress
- Teaching strategies and tailoring instruction to learners' needs
- Introducing an organisational framework (seven phase sequence) to use in training
- Identifying natural supports and cues to assist in the training/support cycle

## Who this course is for

Anyone who helps disabled individuals to find suitable employment, including advisors working in welfare-to-work/employment programmes, Supported Employment or IPS services.

*The training taught many different ways of supporting my students, including strategies to take back to my workplace. I was inspired by the trainers who encouraged us to participate throughout.*

**Fran**, Wandsworth Council

## Course summary

Participants are introduced to the training in systematic instruction (“try another way”) methodology, with a focus on delivering task-based training.

The course’s emphasis is on identifying and implementing natural supports and tailoring the approach to the individuals’ needs, enabling them to achieve independence.

We’ll provide a foundation of TSI though a mix of interactive presentations, discussions, group and individual learning activities and analyse real-life tasks. This supports the delegates confidence to apply their learnings in real-life situations.

Please note our course no longer included teaching an activity to consultant learners.

Each delegate will get a comprehensive TSI manual, e-copies of all paperwork provided during the course and a certificate of attendance.

Your organisation will get a summary of feedback in order to show its impact, and to identify any further learning needs.

The methods of TSI fit broadly into the in-work support stage of the Supported Employment model.

Originally devised by American psychologist Dr Marc Gold in the 1970s and 1980s, it was introduced into the UK in the late 1980s – and provides an effective method for those working directly with people who require additional support to learn practical and complex skills.
